

DIGITAL CAMERA AND METHOD PROVIDING  
SELECTIVE REMOVAL AND ADDITION OF AN IMAGED OBJECT

ABSTRACT

5 A digital camera and a method produce a desired image from an image captured  
with the digital camera. The digital camera includes a computer program that, when  
executed by a controller of the digital camera, implements processing a set of  
captured images to produce the desired image within the digital camera. The desired  
image includes selected image portions of the captured images from the set. The  
desired image is stored in a memory of the digital camera. The method includes  
10 processing a set of captured images to produce the desired image with the digital  
camera. Processing the set includes one or both of image object removal from and  
addition to an image scene.
